Swiss Permit B holder. No work-permit sponsorship required from employers.

EDUCATION

Télécom ParisTech

Nice, France

Master's degree (Diplôme d'Ingénieur) in Computer Science, GPA 3.83/4.0

September 2015 – September 2017

Zhejiang University

Hangzhou, China

Bachelor's Degree in Control Science and Engineering, GPA 3.92/4.0

August 2011 – June 2015

EXPERIENCE

Sony AI Lab, Sony Europe

Zurich, Switzerland

AI Engineer

November 2023 – November 2025

- **Safe AI Development** | *Multimodal LLM, Computer Vision, Diffusion* | Nature
 - * **Reinforcement Learning based Safety Post-Training** Built safety benchmarks and use benchmark metrics as reward signals to post-train VLM models, improving safety while preserving general capabilities.
 - * **Fairness Benchmark Dataset**: curated privacy-preserving, ethically licensed image dataset and evaluated bias in computer vision classification models and VLMs using this benchmark. Research published in Nature and featured on December 4, 2025 cover.

Sea AI Lab, Sea Limited (Shopee's parent company)

Singapore

Research Engineer

October 2021 – October 2023

- **Multimodal Generative AI** | *LLM, 3D Reconstruction, PyTorch*
 - * **Language Models**: collected high-quality multilingual data to train LLM for Southeast Asian languages.
 - * **Speech-driven 3D Talking Avatar Synthesis**: reconstructed 3D representation of speaker from source video and animated a talking avatar based on input speech using NeRF and Diffusion models.
- **Reinforcement Learning and Game AI** | *Jax, TPU*
 - * **AlphaStar AI**: trained the AlphaStar AI model to achieve an 80% win rate against StarCraft II's built-in "Very Hard" level AI.
 - * **RL Engineering Support**: worked on module development and framework refactoring, for applying state-of-art techniques and improving time and memory efficiency; supported experiment deployment on TPUs and GPUs.

Fuxi AI Lab, NetEase Games (2nd biggest game company in China)

Hangzhou, China

Data Mining Research Engineer

December 2017 – October 2021

- **Anti-Fraud Detection** | *Sequence Embedding, Graph Embedding, Keras* | KDD
 - * **Anomalous Behavior Detection**: detected cheating players and provide evidence to justify punishments based on sequential behaviors. Paper accepted at KDD'2018.
 - * **Other Detection**: supported the development of risky trade detection, trajectory detection and hack detection.
- **Players Matchmaking** | *Graph Embedding, Explainable AI, DQN, Operation Research* | KDD, GDC, CIKM
 - * **Matchmaking Services**: designed and deployed matchmaking systems that arrange players into teams to maximize their overall engagement in player-versus-player competitions. Services deployed to 13 gameplays with an average 10% reduction in churn rate. Papers accepted at KDD'2020 and KDD'2021; work presented at GDC'2021.
 - * **Win and User Engagement Prediction Models**: built models to estimate the matchmaking quality, based on graph embedding algorithms and game theory methods like SHAP. Several new win/churn patterns were discovered.

TECHNICAL SKILLS

Programming Languages: Python+cuda, Cython, Shell (Linux), SQL, HTML/CSS+JavaScript

Frameworks and Libraries: PyTorch, Jax, Keras, TensorFlow, NumPy, Matplotlib, OpenCV, FFmpeg

Developer Tools: Git, Kubernetes/Ray/Docker, AWS, GCP (Google Cloud Platform), CI/CD, Apache Flink

Languages: Chinese (native), English (fluent), French (intermediate)
